

Release Process

Most releases can be divided up into several general phases, beginning immediately after the previous release. These phases are:

1. Plan the release
2. Bug parade
3. Code freeze and QA
4. Tag, package and test the release
5. Upgrade our own integrations such as the WP UIO plugin and Infusion Integrations
6. Post the release
7. Announce the release
8. Clean up after the release
