

Starting a Community Source Project

The following are some of the things that our Community Source projects have done to begin our projects.

This work reflects our particular projects and isn't meant to be a single solution – rather a marketplace for taking what works in a particular context and leaving the rest behind. See [Fluid Communities' Resources](#) for links to our community resources.

Collaboration Tools

- wiki - Confluence
- blog - Wordpress
- website - CMSMS
- ticket tracker - JIRA
- code repository - SVN
- meetings - Breeze/Connect
- build server - demos

Project Management Tools

- planning - JIRA filters
- roadmapping - wiki pages
- visualizing - Mindmanager

Community building (Meetings and Beyond)

- calendar - Google Calendar is lightweight and is easy to setup a team calendar
- how often to meet
- processes and standards for contributions/behaviour

Licensing and Intellectual Property

- licenses
- agreements
- commit processes

Event Planning

- what is needed
- mapping events for ppl.
- getting group rates at hotels
- planning excursions

Other Tools that might be helpful

- Planningpoker.com
- [Base Camp](#)
- dotproject.net
- [Apache Software Foundation](#)

Branding / Marketing

- logo creation
