

# Design Crit May 2, 2016 Notes

## IDRC Website Accessibility:

- Add a sitemap (HTML and XML versions)
- Add a pager to the projects table.
- Add table headers to the projects table.
- Projects filters are dropdowns, not text fields.
- When content is changed on screen (i.e. user has selected a new search filter, or changed sorting), use a status box (using role="status") to communicate changes to users.
- Add Search bar across entire site.
  - Are there / should there be options for searching? Is it needed?

## OwnCloud

- Use OwnCloud for day-to-day design work
- Gio will look into implementing long term support for OwnCloud
- Research will be done into looking into using OwnCloud that integrates with git-LFS to enable open sharing of artifacts which are more "formal" (i.e. used for development, grant proposals, reports, papers).
- Applications:
  - <https://apps.owncloud.com/> (directory)
  - [https://doc.owncloud.org/server/8.0/developer\\_manual/app/](https://doc.owncloud.org/server/8.0/developer_manual/app/) (developing your own)
