

Release Process

Most releases can be divided up into several general phases, beginning immediately after the previous release. These phases are:

1. [Plan the release](#)
2. [Bug parade](#)
3. [Code freeze and QA](#)
4. [Tag, package and test the release](#)
5. Upgrade our own integrations such as the [WP UIO plugin](#) and [Infusion Integrations](#)
6. [Post the release](#)
7. [Announce the release](#)
8. [Clean up after the release](#)
