

Tutorial - FSS 1.0 Migration

This page is a work in progress, and any information here should be considered, for now, to be incomplete. This warning will be removed when complete.

This page will walk you through the process of upgrading your existing 0.8 FSS implementation to the new 1.0 version. This tutorial assumes that

- you are already familiar with HTML, Javascript and CSS
- you are familiar with what FSS is and does
- you have an existing implementation that makes use of the FSS and worked with the 0.8 Infusion release.
- you are using the default classes

Location Changes

With the directory restructuring comes the need to update your paths to our files.

If you use...	The new path is...
fluid-components/css/	framework/fss/css/
fluid-components/css /FSS_images	framework/fss /images/

File Name Changes

FSS css file naming convention has changed. "." was replaced by "-" and "fluid" was replaced by "fss"

NOTE: Certain CSS files have been relocated, removed, and restructured. Larger changes can be found below. For specific class names, please see what has been [#Migrated out of FSS](#).

Class Changes

For consistency, all classes used as DOM selectors have been given an "flc-" prefix, and ones used for visual styling have an "fl-" prefix. For more information on our naming conventions, please see [FSS Naming Conventions#Naming Conventions](#)

Migrated out of FSS

This section documents class names that have been taken from the FSS core (found in the framework/fss/css/ folder) and moved into a new CSS file or removed entirely.
