

# Community Meeting (October 31, 2018): Design History and Speculative Future of UIO

## Description

Presenters: Alan Harnum

A discussion of the design history and speculative future design directions of Fluid's [User Interface Options / preferences framework](#) tools. The IDRC is a partner with [CAST](#) on the [CISL](#) project, which is making use of the preference framework. Kim Ducharme from CAST has put the following questions forward for the community to discuss:

- What drove decisions for the current preferences toolbar design, choice of features, order of features, etc.?
- In a perfect world, what would you have built (...or would like to!)?
- What do you still want to know? We can ask our middle-schoolers!
