

# Lightbox Component Development Tasks

## Lightbox Component Development Tasks

These tasks provide an indication of the functionality that is planned for future versions of the Lightbox. These aren't intended to be robust requirements or full-fledged user stories, but rather serve as an indication of work to be done and as a starting off point for conversations among members of the Fluid community. For more specific details about Lightbox-related tasks and issues, please see our [Fluid Issue Tracker](#).

- Refine the Lightbox's support for [ARIA roles and states](#)
- Significant user testing and reworking for screen reader and screen magnifier support

For more information about future plans for the [Reorderer](#), the framework library that provides the Lightbox's core functionality, please see the [Reorderer Roadmap](#) page.
