

Moodle Post-Summit UX Walkthrough Procedures and Findings

The second round of Moodle UX walkthroughs was conducted in early 2008. The report on these activities, compiled from the results obtained by the four people conducting the Walkthroughs (Herb Wideman, Ron Owston, Maureen Patterson, and Denys Lupshenyuk), can be found [here](#). This test round used customized teacher, student, and TA scenarios, which took as their starting point the initial Sakai scenarios. These new scenarios tested unique aspects of Moodle functionality, and were designed to better conform to the patterns of use and roles of users that Moodle affords, which differ to a significant degree from those of Sakai. The scenarios and procedures testers used are available [here](#).
