

fluid-work IRC Logs-2012-06-20

[08:27:31 CDT(-0500)] <jessm> <http://www.nad.org/news/2012/6/landmark-precedent-nad-vs-netflix>

[08:28:00 CDT(-0500)] <jessm> have a look folks who have suffered the frustration of no captions on Netflix on demand

[08:28:06 CDT(-0500)] <jessm> amazon next?

[08:39:25 CDT(-0500)] <jessm> <http://bits.blogs.nytimes.com/2012/06/19/a-computer-scientist-banks-on-human-superiority-over-machines/>

[08:39:30 CDT(-0500)] <jessm> translate the web!

[08:52:05 CDT(-0500)] <Justin_o> jessm: i just saw that yesterday.. pretty cool.. i wish they had more language options though.. i think i'll give it a try

[08:52:26 CDT(-0500)] <jessm> Justin_o: seems like more languages will come with time

[09:01:49 CDT(-0500)] <jessm> sgitheens: ping-aroo?

[09:07:06 CDT(-0500)] <sgitheens> jessm!

[09:07:12 CDT(-0500)] <sgitheens> actually just emailed you

[09:07:15 CDT(-0500)] <sgitheens> before seeing this

[09:07:39 CDT(-0500)] <jessm> sgitheens: wicked! thanks

[09:46:11 CDT(-0500)] <alexn> does anybody know what deferRendering flag does and if it can coexist with createOnEvent ? I cannot find anything anywhere in the documentation about this parameter.

[09:49:26 CDT(-0500)] <alexn> michelled, yura: anyone?

[09:53:24 CDT(-0500)] <alexn> nvm. Found my answers

[10:13:43 CDT(-0500)] <Justin_o> alexn: what was the answer?

[10:14:35 CDT(-0500)] <alexn> Justin_o: it was a custom field, created by another person. Not part of the framework

[10:15:03 CDT(-0500)] <Justin_o> alexn: okay. thanks

[10:58:02 CDT(-0500)] <Justin_o> anastasiac: do you have a windows vm you could do a quick test of dev.studios.fluidproject.org in

[10:58:50 CDT(-0500)] <anastasiac> Justin_o, certainly. can you remind me of what, specifically, I should be double-checking?

[11:01:11 CDT(-0500)] <Justin_o> anastasiac: just generally make sure it works.. the responsive designs have been implemented now so you should probably play with that a bit

[11:01:24 CDT(-0500)] <anastasiac> k

[12:43:09 CDT(-0500)] <michelled> fluid-everone: if you are planning to join the community meeting remotely today, please let me know

[12:43:33 CDT(-0500)] <michelled> fluid-everyone: we will be talking about agile planning and estimating

[12:44:25 CDT(-0500)] <cindyli1> michelled: me pls

[12:44:46 CDT(-0500)] <michelled> ok cindyli1 - I'll get someone to Skype you in

[12:44:53 CDT(-0500)] <cindyli1> thx

[12:44:56 CDT(-0500)] <michelled> in 45 minutes of course 🍷

[13:26:39 CDT(-0500)] <michelled> fluid-everyone: I'd like to start the community meeting at 2:30 today

[13:26:44 CDT(-0500)] <michelled> fluid-everyone: the only remote person I've got on the list is cindyli1 - anyone else?

[13:54:31 CDT(-0500)] <Bosmon> michelled - sorry to be so late - could you possibly Skype me in too?

[18:29:14 CDT(-0500)] <travis_84> Bosmon: you there?

[18:39:41 CDT(-0500)] <Bosmon> Hi there travis_84

[18:39:43 CDT(-0500)] <Bosmon> How are you doing!

[18:42:17 CDT(-0500)] <travis_84> good, yet still nervous about the 'mid-evals' coming up... My late start to coding has made my progress slow. I just got a flash-fallback working for me today

[18:44:48 CDT(-0500)] <travis_84> hopefully I can test the mic levels and start on the recognition stuff this weekend

[18:45:03 CDT(-0500)] <Bosmon> That's cool

[18:45:21 CDT(-0500)] <Bosmon> We were thinking that it was about time to start checking in your code somewhere, if you hadn't already -

[18:45:27 CDT(-0500)] <Bosmon> Would you like to make a github project?

[18:47:32 CDT(-0500)] <Bosmon> As per our earlier discussion, best to not spend too much effort right now on browser/tech coverage, but try to get as much of the interface design working as possible

[18:47:41 CDT(-0500)] <travis_84> I setup a github acct., I just haven't made the project. Right now its all a mish-mash of JS files...

[18:47:43 CDT(-0500)] <Bosmon> You can pick up Flash etc. towards the end of the project if there is time

[18:47:52 CDT(-0500)] <Bosmon> It's ok, it's never too early to check stuff in 🤔

[18:49:45 CDT(-0500)] <travis_84> I haven't done the UI side yet, I have been trying to make it 'friendly'

[18:51:08 CDT(-0500)] <travis_84> like hasGetUserMedia(), or loadUserMedia()

[18:51:26 CDT(-0500)] <Bosmon> "friendly"?

[18:55:33 CDT(-0500)] <travis_84> so that it's essentially drag-n-drop. loadUserMedia() just takes three params to run

[18:56:50 CDT(-0500)] <Bosmon> What is being dragged and dropped - and what is loadUserMedia?

[18:57:00 CDT(-0500)] <Bosmon> I'm worried we have been falling a bit out of touch during this phase 🤔

[18:57:10 CDT(-0500)] <Bosmon> Do you think you could check some code in for us to look at as soon as you can?

[18:58:29 CDT(-0500)] <travis_84> Yeah I can

[21:32:33 CDT(-0500)] <travis_84> sorry it took me so long

[21:32:49 CDT(-0500)] <travis_84> still learning git

[21:33:06 CDT(-0500)] <travis_84> I posted files at <https://github.com/travis-love/Eleuthera>
