

OER Commons Accessibility Testing Results

Ticket	Status	Issue	Notes
https://www.assembla.com/spaces/iskme/tickets/555-facebook-like-and-google-plus-buttons-are-not-understandable-when-used-with-a-screen-reader	Alex has done some research; can't be solved: we'll leave it as is for now	Facebook like widget	Facebook like and Google plus buttons are not understandable when used with a screen reader
https://www.assembla.com/spaces/iskme/tickets/598	On production	On "My OER" page, folder delete and add buttons confusing for screen readers	On the "My OER" page, the folder delete and add buttons after each OER name, to the right of the rating widget, are not described well when using a screen reader. They could use more descriptive text somehow.
https://www.assembla.com/spaces/iskme/tickets/592	On production: tested	"Add OER" bookmarklet	The panel on the front page in the right column allows the user to add a widget to their bookmarks bar. When used with a screen reader it is not clear what the button does. When activated with the keyboard the dialog that opens does not get focus. - https://github.com/acheetham/OER-Commons/tree/592-add-oer-button
https://www.assembla.com/spaces/iskme/tickets/563	On production: tested	Login drop down	When using a screen reader, the account settings menu is not keyboard accessible
https://www.assembla.com/spaces/iskme/tickets/575	On production	Select a folder widget on the OER summary page does not work with a keyboard	https://github.com/anvk/OER-Commons/tree/OER-575
https://www.assembla.com/spaces/iskme/tickets/585-some-links-and-buttons-do-not-receive-keyboard-focus	On production	Some links and buttons do not receive keyboard focus	Search button on MY OER page, "no strings attached" link in the detailed view, "Read fine print" link in search results, Save and Change buttons on the edit account settings page in My OERs preference settings
https://www.assembla.com/spaces/iskme/tickets/584	On production: tested	Login process accessibility	If an error is made entering login information, there does not seem to be a way to get back to the login form using a keyboard. Perhaps have focus sent to an anchor just before the error message in the login box. NOTE: In Anastasia's branch: https://github.com/acheetham/OER-Commons/tree/584-failed-login <ul style="list-style-type: none"> • the aria-live stuff doesn't work in IE8 (nor does any other demo of aria-live) • the focus fix seems a bit hacky
https://www.assembla.com/spaces/iskme/tickets/595	On production	Search results "details" toggle	The details toggle with each search result announces as "show a list". This text might be more meaningful as "expand/collapse details" or something like that.
https://www.assembla.com/spaces/iskme/tickets/553	On production	Rating widget	https://github.com/ISKME/OER-Commons/pull/132 New issue not fixed with first commit: Ratings widget is displaying the label text in the top frame of the OER display frameset. Fix for this new issue has been added to origin work on the ratings widget.
https://www.assembla.com/spaces/iskme/tickets/597	On production		Add a clearer title for the "open" image next to a search result
https://www.assembla.com/spaces/iskme/tickets/590	On production; Alex should test; And he tested also found that MyInfusion was not on production at all. But it made to production as of Friday morning (ticket 596)	kbd a11y in auth tool	
https://www.assembla.com/spaces/iskme/tickets/552-information-popups-are-not-usable-with-a-keyboard	On production	Tooltip widget	'What is this' link on the advanced search page is not usable with the keyboard. Using mouse it shows a popup with information.
https://www.assembla.com/spaces/iskme/tickets/545-add-and-improve-alt-text	On production	Adding and improving alt text	
https://www.assembla.com/spaces/iskme/tickets/548-improve-tab-order	On production	Keyboard navigation	
https://www.assembla.com/spaces/iskme/tickets/543-javascript-error-in-ie8	On production	Javascript errors	
https://www.assembla.com/spaces/iskme/tickets/549-skip-to-main-content-link	On production, AC tested and confirmed	Skip to content link	A "jump to main content" link in the header will be very useful for keyboard users. Anastasia's note: Currently, I can't get the authoring tool to into Preview mode, so I've been unable to test the 'skip to' link on that page.

https://www.assembla.com/spaces/iskme/tickets/572	On production	Get Satisfaction widget	https://www.assembla.com/spaces/iskme/tickets/551-feedback-panel-not-usable-with-a-keyboard-or-a-screen-reader The feedback panel is not usable with a keyboard or a screen reader. When it opens up, screen readers are not notified and do not read the content in it. Using the keyboard to try to navigate it only allows you to focus on two of the many focusable items and even these could use better descriptions when used with a screen reader. Once the panel has opened, it becomes a keyboard trap, meaning you can never tab away from it or close it.
https://www.assembla.com/spaces/iskme/tickets/546-bookmark-and-share-popup-does-not-allow-users-to-navigate-past-it-when-using-a-keyboard	On production	Bookmark and Share widget	<p>The "Bookmark and Share" popup sends focus to the top of the page when you tab past it. This means that everything after the 'share' section is difficult to reach through keyboard navigation. This has been improved slightly with a newer version but the interaction is still awkward. Now the user is sent up to the browser chrome after they've tabbed through the popup and then returned to the point in the page where they were prior to the</p>  <p>popup opening.</p>
https://www.assembla.com/spaces/iskme/tickets/550-focus-styling-when-using-a-keyboard-to-navigate-the-site	On production	Focus styling when using the keyboard	<ul style="list-style-type: none"> • General focus styling on FF should be improved • Browse Now button has no focus styling when focused with the keyboard • On the contribute page, the buttons don't have focus styling
https://www.assembla.com/spaces/iskme/tickets/581-display-issues-today--search-results-and-my-items	On production	Styling issue when using "my item" page and course search result page	Our search results and my items are not displaying correctly. Staging and production, Chrome, Firefox and IE.
https://www.assembla.com/spaces/iskme/tickets/562-slides-in-the-carousel-are-not-understandable-with-a-screen-reader	On production	Carousel	The content of the sliding carousel is not very accessible to screen-reader users. Consider adding descriptive link text to links that are displayed using background images, or alt text to images that are not links.
