

listeners option description

Description	An object defining listener functions for the events supported by a component.
Notes	Both component developers and integrators can define listeners for events.
Example Definition	<pre>fluid.defaults("component.name", { events: { onSave: "preventable", onReady: null }, listeners: { onSave: component.name.saveValidatorFn }, ... });</pre>
Example Override	<pre>var myComp = component.name(container, { listeners: { onReady: myReadyNotificationFn, }, ... });</pre>
