

_UIO tutorials adding dependencies 1

UI Options depends upon [Fluid Skinning System \(FSS\)](#) and the Infusion Framework, so you will need to add to your pages dependencies for

- the FSS CSS files,
- the UI Options own CSS files, and
- the main Infusion JavaScript file, `InfusionAll.js` (or `MyInfusion.js` if you've created a custom build).

In the header of the file, link to the FSS CSS files with `<link>` tags (you'll likely have to adjust the paths to reflect where you've saved the Infusion package).

```
<!-- Required CSS files -->
<link rel="stylesheet" type="text/css" href="framework/fss/css/fss-layout.css" />
<link rel="stylesheet" type="text/css" href="framework/fss/css/fss-text.css" />
<link rel="stylesheet" type="text/css" href="components/uiOptions/css/fss/fss-theme-bw-uio.css" />
<link rel="stylesheet" type="text/css" href="components/uiOptions/css/fss/fss-theme-wb-uio.css" />
<link rel="stylesheet" type="text/css" href="components/uiOptions/css/fss/fss-theme-by-uio.css" />
<link rel="stylesheet" type="text/css" href="components/uiOptions/css/fss/fss-theme-yb-uio.css" />
<link rel="stylesheet" type="text/css" href="components/uiOptions/css/fss/fss-text-uio.css" />
```
