

# (Floe) UI Options Design

## Version C (2012)

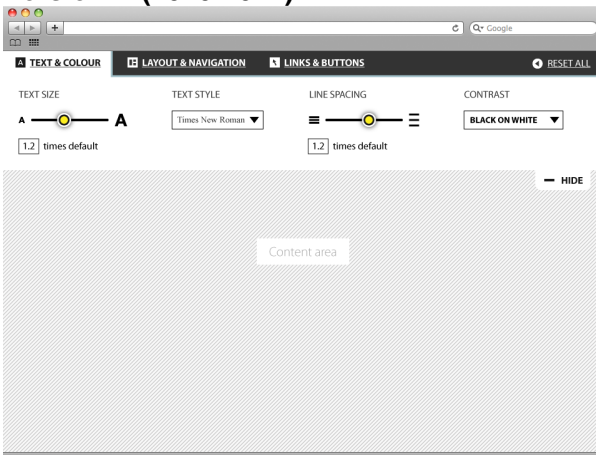

**Goals:** Provide users with two ways of adjusting preferences: 1) Enabling common, very high-level preset options, or 2) Adjusting specific, granular preferences. Differentiated from the previous version by:

1. Introduction of presets
2. Extensibility (form of UIO can now handle addition of future preferences) & responsive design
3. Search through granular preferences by name, keyword, activity, etc.
4. Multiple ways to sort/categorize preferences (e.g., commonness, recency, function, etc.)
5. Persistence and management of profile

## Version B (2010-2011)

**Goals:** Provide a small set of mid-granular preferences (< 12 total), categorized by preference function. Differentiated from the previous version by:

1. Categorization (functional categories vs. more ambiguous needs)
2. Reduction of granularity
3. On-page, real-time preferences (instead of separate page, asynchronous preferences)
