

PCP-MM test protocol for third pilots

Specific questions and prompts for each page would be the following (these may need some refinement):

Auto-Configuration (pages 1-3):

1. Ask the user what they would expect each option would do (undo all, help, close)
 - a. (if they miss any of the options, make note of this)
 - b. What would they do if they didn't like the way their preferences had been applied?
2. Ask the user what they would expect selecting the i icon would do
3. (i icon is selected)
 - a. Ask the user what they expect selecting each option would do (try different, feedback, help, close)
 - b. (if they miss any of the options, make note of this)
 - c. What would they do if they didn't like this setting?

Recommendations (pages 4-6):

4. Context: this message would appear automatically when the environment becomes dark
 - a. Ask the user what they would expect each option would do (try it out, help, cancel)
 - b. (if they miss any of the options, make note of this)
5. (try it out is selected)
 - a. Ask the user what they would expect selecting the i icon would do
 - b. What would they do if they decided they didn't like this setting?
6. (i icon is selected)
 - a. Ask the user what they expect selecting each option would do (always do this/never do this/not right now, help, feedback, close)
 - b. (if they miss any of the options, make note of this)
 - c. What would they do if they decided they didn't like this setting?
 - d. What would they do if they really liked this setting?

In general:

- would they recommend different text labels for any of the buttons or links?
- was there anything that was confusing?
- what did they like about the interface? which parts were clear to them?
- do they think there is any missing functionality? (anything they might want to do but couldn't)?
