

# fluid-work IRC Logs-2012-03-08

[12:07:57 CST(-0600)] <Justin\_o> yura, Bosmon: I have 3 subcomponents, all of which have the same type. However, when i trigger an event in one, the wrong subcomponent is listening to it. The defaults of the subcomponent are to listen to it's own even and change some part of the DOM

[12:08:29 CST(-0600)] <Justin\_o> Any idea how i make sure that it only listens to it's own events.. and not its twin's

[15:11:52 CST(-0600)] <michelled> cindyli: I just created this JIRA for you. Please flesh it out with what you are going to do. 🙄 FLUID-4646

[15:17:17 CST(-0600)] <cindyli> ok, michelled, a big topic. 🙄

[15:18:13 CST(-0600)] <michelled> yes, a big topic with a ridiculously small JIRA at the moment 🙄
