Goals of New Version of Standard

- **Candidate Goals**
  - Address context (and define context)
  - Harmonize with ISO 24752 (Universal Remote Standard)
  - Add possibility of 3D printing and needs and preferences for physical form
  - Address the implementation of usage metrics and user feedback to label resources
  - Address interaction needs and preferences
  - Add linguistic and cultural preferences
  - Further address cognitive access needs and preferences
  - Allow for continuous updating of needs and preference terms
  - Define a process for maintaining a core set of needs and preference terms
  - Allow for inclusion of context and device related properties
  - Have architecture that also allows for inclusion of PERMISSIONS (Data regarding things a person is authorized to use - and in which contexts)

**Ideas on registries**

Some ramblings that might be wrong on the role of a Registry in relation to a Standard
