

Leaner Options (UIO) Mobile Designs - Discussion Notes

Aug 17 2016

Summary:

1. unify mobile and desktop designs
2. incorporate vertically scrolling panel into both - panel opens from left side - mobile shows one panel at a time (desktop shows all)
3. consider mobile navigation and scrolling - use arrows and swipe
4. reset button in mobile and desktop - have individual reset buttons on numerical panels, plus overall reset

Discussion:

- lock content scrolling while panel is open (mobile)?
- touch outside of panel to close panel (mobile)?
- panel pushes content down (mobile)?
- only show reset (full) when you open the panel (same as current desktop)
- use menu or dialog (?) - tab order to open panel?
- remove GPII integration from current designs (for now)
