

# fluid-work IRC Logs-2012-03-16

[12:29:52 CDT(-0500)] <anastasiac> michelled, I've issued a pull request for the Spanish fixes: <https://github.com/fluid-project/infusion/pull/213> My branch is a copy of your branch.

[13:14:32 CDT(-0500)] <am33sh> hello everyone

[13:16:15 CDT(-0500)] <am33sh> yura : sir, i was thinking of making editing feature available to only registered users for epub reader

[13:18:16 CDT(-0500)] <yura> am33sh: hi, i think it is a little out of scope as the project would focus on the reader component itself, not really the infrastructure around it or the context around it. Similar to jQuery UI widgets: tabs, dialog etc, it's just a component, how it's used is up to the implementor

[13:18:20 CDT(-0500)] <am33sh> yura : where as others features will be available to all the users of reader (whether registered or unregistered users)

[13:19:37 CDT(-0500)] <am33sh> yura : so we dont have to make a website

[13:20:12 CDT(-0500)] <am33sh> yura : only a epub reader widget is to be made

[13:50:36 CDT(-0500)] <yura> am33sh: yes that's right

[13:52:31 CDT(-0500)] <am33sh> yura : okay

[14:11:09 CDT(-0500)] <am33sh> yura : i have noted some basic functionalities of epub reader

[14:12:54 CDT(-0500)] <am33sh> yura : customization - 1. font-face 2. font size 3. text alignment 4. Font Color 5. Brightness & Contrast 6. Background color

[14:14:56 CDT(-0500)] <am33sh> yura : Accessibility - Use of keyboard shortcuts as well as of mouse eg. use of +/- to increase or decrease font size of the text

[14:16:02 CDT(-0500)] <am33sh> yura : editing - 1. Adding Notes 2. Text highlighting 3. Bookmarks 4. Text Striking

[15:03:03 CDT(-0500)] <am33sh> yura : are these functionalities okay

[15:03:50 CDT(-0500)] <yura> am33sh: that's great, I would also take a look at UI Options Component (part of Infusion framework) , since it provides a framework for most of the customization you mentioned and see if you can integrate it with it. e.g. maybe have a demo page that would have both components in place, or have a reader tab in the UI Options itself

[15:06:30 CDT(-0500)] <am33sh> yura : okay sir

[15:14:53 CDT(-0500)] <am33sh> yura : one general query - do usernames of both github and fluid have to be same (i read somewhere they have to be same but i dont remember where)

[15:15:43 CDT(-0500)] <yura> am33sh: I dont think so (not aware) i think you can be flexible

[15:16:19 CDT(-0500)] <am33sh> yura : okay, thanks

[15:16:54 CDT(-0500)] <am33sh> yura : bye

[15:17:08 CDT(-0500)] <yura> am33sh: bye
