

fluid.findAncestor

fluid.findAncestor(element, test)

Finds the nearest ancestor of the element that passes the test.

```
fluid.findAncestor(element, test);
```

File name: Fluid.js

Parameters

element	(Element) DOM element
test	(Function) A function which takes an element as a parameter and returns true or false for some test.

Return Value

Element	the nearest ancestor that passes the test
----------------	---

See Also

Example

```
var smallHeader = fluid.jById(id);
var bigHeader = fluid.findAncestor(smallHeader, function (element) {
    return $(element).is(selectors.sortHeader);
});
```

In this example, `fluid.findAncestor()` is used to find an ancestor of `smallHeader` that has a desired selector.
