

Lightbox Component Development Tasks

Lightbox Component Development Tasks

These tasks provide an indication of the functionality that is planned for future versions of the Lightbox. These aren't intended to be robust requirements or full-fledged user stories, but rather serve as an indication of work to be done and as a starting off point for conversations among members of the Fluid community. For more specific details about Lightbox-related tasks and issues, please see our [Fluid Issue Tracker](#).

- Refine the Lightbox's support for [ARIA roles and states](#)
- Significant user testing and reworking for screen reader and screen magnifier support

For more information about future plans for the [Reorderer](#), the framework library that provides the Lightbox's core functionality, please see the [Reorderer Roadmap](#) page.
