

Infusion Framework Best Practices

An application created using the Infusion Framework will be a collection of individual components. These pages provides guidelines and information that will help you to create components that

- function optimally with the Infusion Framework,
- take full advantage of Framework features, and
- are easy to maintain.

General Guidelines

- [Use declarative configuration whenever possible](#)
 - [Use events declaratively](#)
 - [Add methods to a component using invokers or members](#)
- [Define components to be 'autoInit'](#)
- [Define defaults in a consistent order](#)

Useful Information

- [Working With Component Grades](#)
- [The Component Lifecycle](#)
- [Using Invokers](#)
- [Using Free Functions](#)
