

Uploader

This component is in [Preview status](#)

The Uploader allows users to upload files. The user can select desired files from their computer, view them in a queue, add or remove files to and from the queue, and upload them.

Features

- Allows selecting multiple files in a single OS-specific file dialog
 - Shows the selected files in a queue
 - Allows adding or removing files from the queue
 - Provides complete progress information as the files upload
 - Shows whether the files have been uploaded successfully or not
- The user interface is completely customizable in HTML. With the exception being the OS specific file open dialog.
