

# fluid.allocateSimpleId

## fluid.allocateSimpleId(element)

Allocate an id to the supplied element if it has none already, by a simple scheme resulting in ids "fluid-id-*nnnn*" where *nnnn* is an increasing integer.

```
fluid.allocateSimpleId(element);
```

**File name:** Fluid.js

## Parameters

<b>element</b>	(Element) The element to place the id on.
----------------	---

## Return Value

<b>String</b>	representing the id
---------------	---------------------

## See Also

- [fluid.allocateGuid](#)

---

## Example

```
var titleId = fluid.allocateSimpleId(title);
```

In this example, the string returned, `titleId` will be added as the `id` attribute to the `title` node.
