System saves user preference

The user, who is an instructor, has the Gradebook page open and is copying and pasting students' mid-term exam grades from her spreadsheet.

A screenshot of a web application showing a table of student grades. The table has four columns: Name, User ID, Points, and Comments. There are 10 rows of data. The table is part of a pagination system with page numbers 1, 2, 3, 4 (last) and navigation links for previous and next. A 'Show 10 per page' dropdown is visible in the top right corner.

The user would like to see all 43 students in one page, so she clicks on the dropdown "Show x per page".

A screenshot of the same web application, but with the 'Show x per page' dropdown menu open. The menu shows options for 10, 20, 50, 100, and 200 items per page. The '50' option is highlighted. The table below shows the same 10 rows of data as the previous screenshot.

Viewing 1-43 of 43

The next day, a couple of her students requested their marks to be corrected. She logs in to the Sakai site to see the Gradebook again. This time she opens the Gradebook, it remembers her preference from the previous session and displays the entire list of students immediately (screen looks the same as above).
