

# Storytelling Tool: Useful information re server deployments

Backups of the server runs nightly using a tool called Attic.

There's one central backup server with a backup job that runs on a nightly basis.

- <https://ci.incd.ca/job/infra-backups/>
- [https://github.com/inclusive-design/ci-service/blob/master/jenkins\\_jobs/infra-backups.yml](https://github.com/inclusive-design/ci-service/blob/master/jenkins_jobs/infra-backups.yml)

The database and uploads are maintained in the host file-system, so the [server rebuild job](#) on its own will not remove the stories or their associated files.
