Overriding: Flexible, unequal column widths

The FSS does not support flexible, unequal column widths, but it is not difficult to create FSS-style classes to accomplish this. This examples shows styles which could be used to create two columns that are fixed at 40% and 60% of the container width. The size of gap between the columns can be tweaked by adjusting the actual % numbers in the styles.

NOTE: The background colours on this page have been added to help the reader recognize the different regions of the demo. They are *not* provided by the FSS.

This is the first column, 40%.
Aliquam erat volutpat. Aliquam consequat, quam at varius tincidunt, nunc augue blandit sem, ac aliquam libero eros ac eros. Proin sed nibh lacus.
This is the second column, 60%.
Aenean urna erat, accumsan vel porttitor vitae, blandit a magna. Proin sed nibh lacus.
Phasellus nec nisl eget purus laoreet fermentum. Mauris accumsan congue lectus a fringilla. Aliquam erat volutpat. Aliquam consequat, quam at varius tincidunt.

The custom classes created for this layout:

```
.fl-col-mixed-2 .fl-col-flex-40 {width: 38%;}  
.fl-col-mixed-2 .fl-col-flex-60 {width: 58%;}
```

The mark-up used to produce this layout:

```
<div class="fl-container-flex80 fl-centered">
  <div class="fl-col-mixed-2">
    <div class="fl-col-flex-40 fl-force-left">This is the first column, 40%.<br/>
      Aliquam erat volutpat. Aliquam consequat, quam at varius tincidunt,
      nunc augue blandit sem, ac aliquam libero eros ac eros.
    </div>
    <div class="fl-col-flex-60 fl-force-right">This is the second column, 60%.<br/>
      Aliquam erat volutpat. Aliquam consequat, quam at varius tincidunt,
      nunc augue blandit sem, ac aliquam libero eros ac eros.
    </div>
  </div>
</div>
```
