Design and Development Process

One of the goals of the Fluid project is to develop processes through which designers and developers can be most effective in creating usable software.

Design process from Fluid Engage

Processes from Fluid Academic

We've been creating draft workflows that attempt to show what we do in Designing and Developing a component. These diagrams are useful to the team because it establishes a common roadmap of work activities and deliverables, it gives us a measure of how far along we are, and it helps us to know and plan for what is coming up.

This is a draft workflow of the Design Process:

The DesignFramework filter in JIRA contains a list of all the design tasks performed by design team members as part of this process. To see them in the proper order, sort them ascending by "Key."
This is a draft design of the Development process with Design interwoven...
