- [Bug tracker](#)
- [User Interface Options Iteration Planning](#)

Research

- [Research and Conceptualization](#)
- [Research of viability of using icon fonts in UI Options](#)
- [Research SVG Icons](#)

Design Functionality:

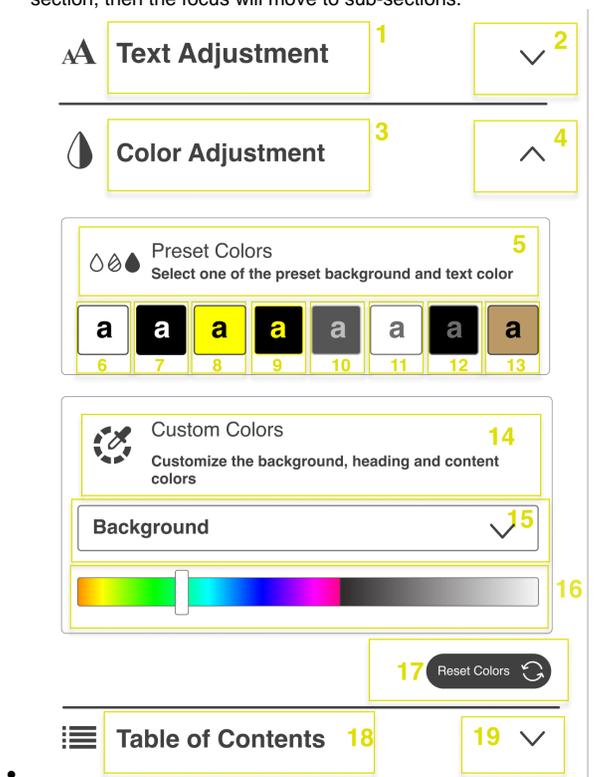

- The new design has the 'user preferences' button located on the right side of the page
- The button has dynamic scrolling with the page scrolling
- The main panel has 7 main user preferences. Some of them have sub preferences.
- There are buttons such as a drop-down list, radio buttons, and sliders
- There are 2 main buttons at the bottom: close accessibility panel (this is contract the expanded panel) and reset all filters (this will bring the web page to its default state)

Options:

- Text Adjustment
 - Font size
 - Line spacing
 - Letter Spacing
 - Word spacing
 - Text style
- Color Adjustment
 - Preset colors
 - Custom colors
- Table of contents
- Enhances Inputs
- Syllables
- Simplify
- Cursor adjustment
 - Magnifies black cursor
 - Magnifies white cursor

Navigating through the preferences (based on (Floe) UI Options Design Walkthrough, C.1)

- Arrow buttons
 - clicking the down arrow button smoothly scrolls the boxes until the last overlapped box is first (or to in the closest spot to the left if remaining boxes would not fill full width)
- Scrolling / Swiping
 - scrolling/swiping moves boxes depending on distance scrolled/swiped, on release boxes smoothly snap in order for the maximum amount to be fully visible and centered to the panel
 - there is the vertical scroll bar located on the extreme right side
- Tab Order
 - once the UIO panel is opened, the focus is moved to preference boxes (from first to last) followed by Close Preferences and Reset Filters button at the bottom
 - focusing on preferences at the edge of the screen smoothly moves boxes over by one
 - the focus will begin with the preference title and then the 'expand' arrow. If the user chooses to expand the section, then the focus will move to sub-sections.

Activating Preferences

- Mouse
 - all UIO panel interactables switch to pointer cursor on hover
 - slider uses both a pointer cursor on hover over the knob and the bar
 - clicking on the icons at the beginning and end of a slider smoothly moves knob by 10%
- Keyboard

- sliders and radio buttons are adjusted with arrow keys, check boxes and on/off switches are activated with space or enter

Widget Boxes Responsiveness

- adjusted margins to fit the maximum amount of boxes centred to the panel with 10-30% of next/previous boxes revealed on the sides
 - minimum of 10px on right margins

User Preferences button

The button is located on right top corner when the user loads the pages. The button has dynamic scrolling as the user scrolls and navigates through the page

Section 1: Text adjustment

- This has 4 subsections. Each subsection has a reset button for further customization.
- The + and - buttons can be used to change the values.
- The default value will be 1 whereas 0.7 will be the minimum and 2 will be the maximum.
- The text style section had 3 main font options

Text Adjustment

Font Size
Increase or decrease font size

- +

Reset Font Size ↻

Line Spacing
Increase or decrease gap between text line

- +

Reset Line Spacing ↻

Letter Spacing
Increase or decrease gap between letters

- +

Reset Word Spacing ↻

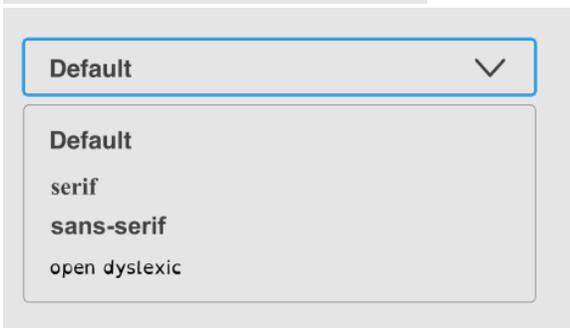

Word Spacing
Increase or decrease gap between words

- +

Reset Word Spacing ↻

Text Style
Change the font used

Default ▾

Section 2: Color Adjustment

- This has 2 subsections. The entire color section has 1 single reset button
- The preset colors section has the same uio colors based on the current design for quick changes
- users can you the custom colors section to change the background, headings and contents font

Color Adjustment ^

 **Preset Colors**

Content

Section 3,4,5 and 6: Table of contents, enhances inputs, syllables

Based on the latest design on <https://build-infusion.fluidproject.org/demos/prefsframework/> these sections are the exact same with similar buttons

☰ Table of Contents ^

Create a table of content for the webpage OFF ON

⦿ Enhanced Inputs ^

Emphasize links, buttons, menus, textfields, and other inputs OFF ON

yo yo Syllables ^

Display words separated into syllables OFF ON

■ Simplify ^

Only display the main content OFF ON

Section 7: Cursor adjustments

- This section had 2 options to adjust and magnify and change the color of the cursor's appearance
- This section has its individual reset button

🖱️ Cursor Adjustment ^

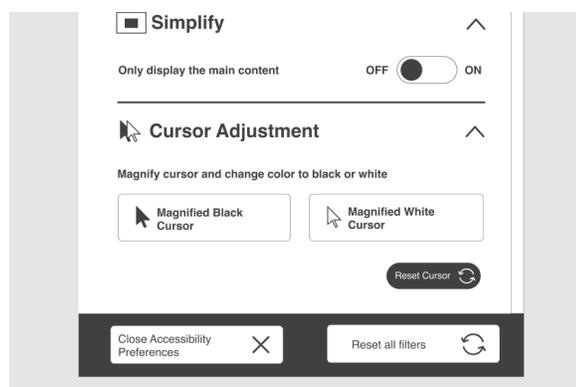

Magnify cursor and change color to black or white

Reset Cursor 

Bottom buttons

- There are 2 main buttons at the bottom: close accessibility panel (this is contract the expanded panel) and reset all filters (this will bring the web page to its default state)

[User Interface Options in the nightly build demo site »](#)

User Interface Options (also known as Learner Options) allows users to personalize interfaces and content to meet individual needs and preferences.

Features

With User Interface Options, the user can customize content the following ways:

- Text size and style
- Line spacing
- Colour and contrast
- Display a table of contents
- Emphasize links
- Simplify layout
- Enable text-to-speech without additional plugins or software

If used with the [Floer Video Player](#), User Interface Options can also adjust:

- show captions and transcripts
- specify language

The General Idea

Computers are everywhere (on our smartphones, on a ticket kiosk, on a desktop computer, on a touch screen at the grocery store). The look and feel and presentation of content on those devices varies greatly and often doesn't meet individual needs and preferences. *User Interface Options* allows users to customize the presentation of material on devices to meet their unique needs and preferences.

A website developer will typically integrate *User Interface Options* into a site or application.

A number of sites already have User Interface Options implemented. Have a look:

- [OER Commons](#)
- [Inclusive Learning Design Handbook](#)
- [Inclusive Design Institute](#)

The team is working on making a cloud-based UIO that will allow users to store "themes" in the cloud for easy reuse across our increasingly digital world.

That work is being led by the [Floer Project](#) and is also happening within the [Cloud4All project](#) and [Preferences for Global Access Year 2 \(2014-2015\)](#).
